1. Nomenclature (10%)

(1) (2) (3) (4) (5)

2. Draw the following molecular structures. (10%)

(1) 2-butanol (2) 2,2,5-trimethylhexane (3) toluene (4) 6-(1,2-dimethylpropyl)-4-propyldecane (5) 2-(2-chloro-4-ethyl)-4-propyldecane

3. Determine whether each of the following is a *cis* isomer or a *trans* isomer: (6%)

(1) (2) (3)

4. Assign *E* or *Z* configuration to the following alkenes. (10%)

(1) (2) (3) (4) (5)

5. Indicate whether each of the following structures has the *R* or the *S* configuration: (10%)

For example:

(1) (2) (3)

(4) (5) (6) (7)

<背面継続>
5. Classify the following species aromatic, nonaromatic or antiaromatic molecule. (10%)

(a)  (b)  (c)  (d)  (e)  (f)  (g)  (h)  (i)  (j)

Aromatic: _____________________________
Nonaromatic: ________________________
Antiaromatic: ________________________

6. Draw resonance contributors for each of the following structures. (14%)

(1)  
(2)  

7. Give the major product of each of the following reactions: (16%)

(1)  
(2)  
(3)  
(4)  
(5)  
(6)  
(7)  
(8)  

8. Please draw enol or keto tautomer of the following structure. (4%)

(1)  
(2)  

9. Please translation and explain the following essay. (10%)

The Lucas Test

Before spectroscopy became available for structural analysis, chemists had to identify compounds by tests that gave visible results. The Lucas test is one such test. It determines whether an alcohol is primary, secondary, or tertiary by taking advantage of the relative rates at which the three classes of alcohols react with HCl/ZnCl₂.

To carry out the test, the alcohol is added to a mixture of HCl and ZnCl₂ (known as Lucas reagent). Low-molecular-weight alcohols are soluble in Lucas reagent, but the alkyl halide products are not, so they cause the solution to turn cloudy. If the alcohol is tertiary, the solution turns cloudy immediately. If the alcohol is secondary, the solution turns cloudy in approximately one to five minutes. If the alcohol is primary, the solution turns cloudy only if it is heated. Because the test relies on the complete solubility of the alcohol in Lucas reagent, it is limited to alcohols with fewer than six carbons.
