- (10%) Suppose that 10 numbers are selected at random from the interval $[0, 1]$. Find the probability that the first 5 numbers are less than $1/4$ and the last 5 numbers are greater than $1/2$.
- (30%) Suppose that orders at a restaurant are iid random variables with mean $\mu = \$8$ and standard deviation $\sigma = \$2$.
 - Estimate the probability that the first 100 customers spend a total of more than \$840.
 - Estimate the probability that the first 100 customers spend a total of between \$780 and \$820.
 - After how many orders can we be 90% sure that the total spent by all customers is more than \$1000?
- (40%) In a batch chemical process used for etching printed circuit boards, two different catalysts are being compared to determine whether they require different emersion times for removal of identical quantities of photoresist material. Twelve batches were run with catalyst 1, resulting in a sample mean emersion time of 24.6 minutes and a sample standard deviation of 0.85 minutes. Fifteen batches were run with catalyst 2, resulting in a mean emersion time of 22.1 minutes and a standard deviation of 0.98 minutes.
 - Calculate a 90% confidence interval for the difference between population mean emersion times for the two catalysts.
 - What assumptions are necessary for your analysis in (a)?
 - Interpret the confidence interval you obtained in (a). Is the message different if we use a significance level of 0.01 for the analysis?
 - Test at level 0.1 to see whether the data suggests any difference between emersion time variances for catalyst 1 and 2.
- (20%) Plot the CDF of the sum of five independent Bernoulli random variables with $p = 0.5$ and the CDF of a Normal random variable of the same mean and variance. Plot them together by using the same x-axis and y-axis.

TABLE 4 F DISTRIBUTION

Entries in the table give F_{α} values, where α is the area or probability in the upper tail of the F distribution. For example, with 12 numerator degrees of freedom, 15 denominator degrees of freedom, and a .05 area in the upper tail, $F_{.05} = 2.48$.
