

大同大學 101 學年度研究所碩士在職班入學考試試題

考試科目:科技英文

所別:工程管理學程研究所

第 1/1 頁

註:本次考試 不可以參考自己的書籍及筆記; 不可以使用字典; 不可以使用計算器。

請將以下的英文翻譯成中文 (請先抄題目後再翻譯, 每題20%)

1. Volcanoes release valuable chemicals from inside the earth. One valuable chemical is sulphur which is used in industry and to make medicines.
2. Scientists have noticed that animals often behave strangely before an earthquake. Perhaps the animals can feel things happening inside the earth which we cannot.
3. People pour waste of all kinds into water. Human waste from sinks and toilets is called sewage. Most sewage ends up in rivers, lakes or seas. Waste chemicals from factories are also poured into the oceans.
4. Animals that live in water also need air to breathe. Whales and dolphins are mammals and have lungs like us. They have to come to the surface for air. Fish can take oxygen out of the water with their gills.
5. People have lived in tropical rainforests for thousands of years. The forest provides them with food, shelter, clothes, tools and medicines. Today, there are millions of people living in rainforests around the world.
